INDUSTRIAL TIRES
PRODUCT CATALOG 2021

FERENTINO
TYRE CORPORATION

STRONGER PERFORMANCE SAVES YOU TIME

FERENTINO INDUSTRIAL TIRES ARE THE ONLY CHOICE for those who want maximum performance and minimum wear. Those who work hard know how crucial time is. Continuous and extended use with no downtime for maintenance is a critical time saver. This indisputable advantage combined with high quality compounds and raw materials that extend the tire's lifespan allows us to achieve another key result: a reduction in costs. The wide range of **FERENTINO INDUSTRIAL TIRES** products is able to meet any and all requirements in terms of reliability, performance and safety. Guaranteed return for a long-term investment.

A SINGLE RESPONSE TO ALL YOUR NEEDS: PERFORMANCE

CUT OPERATING COSTS

Reducing rolling resistance means reducing heat and thus energy consumption. The benefits are a greater yield per battery charge for electric forklifts and fewer refuelling stops for those based on internal combustion engines.

ACHIEVE HIGH STANDARDS OF QUALITY AND RELIABILITY

The management of the entire production process makes FERENTINO INDUSTRIAL TIRES one of the few companies able to choose compounds, technologies, machinery and moulds, while at the same time implementing unparalleled know-how. This results in highly proven and cutting edge products that always offer the performance you need.

IMPROVE EFFICIENCY

Constant performance levels, limited wear, plus comfort, stability and excellent loading capacity guarantee higher efficiency even for heavy duty forklifts.

CHOOSE THE BEST PRODUCT

Many of the leading manufacturers of forklifts and industrial vehicles have chosen FERENTINO INDUSTRIAL TIRES as their original equipment supplier and have cooperated with the Research and Development Centre to develop their products according to different needs: efficiency, safety, and comfort. Users can benefit from the wide range of products offered by FERENTINO INDUSTRIAL TIRES, a leading specialist in the sector globally.

REDUCE YOUR COMPANY'S FOOTPRINT

By ensuring industrial tires a longer lifespan and decreasing the energy consumption of vehicles, which in turn reduces polluting emissions and thus the overall ecological impact is significantly reduced.

SPECIALIST STRENGTH

The quality of the compounds used is essential in the solid industrial tire sector.

TREAD COMPOUND

Resistant to wear and tear, guarantees excellent grip on wet or slippery surfaces (e.g. oil stains)

CUSHION COMPOUND

Central compound, lowers operating temperature and ensures low rolling resistance.

+LIFE

+COMFORT

+SAVING

+STABILITY

BASE 2

Extremely hard material that reduces deformation and supports the load while preserving bead stiffness and preventing the tire from coming off the rim.

BASE 1

Ensures the tire remains attached to the rim over time: the metal rings inside the tire adhere perfectly to the metal. Perfect coupling to the rim: easy to fit and remove.

SPECIAL-S

This version was designed and developed especially for loaders and produced in the 20 and 24 inch sizes. It is constructed using compounds which are particularly resistant to tearing. The tire stands out for its resistance to wear and tear, jolts, cuts and abrasions, as well as for its high rigidity that provides stability to the vehicle and, therefore, to the load. Used for vehicles which carry loads, usually in environments with extreme conditions, such as scrap yards and dumps.

HIGH CAPACITY-HL

This is a tire designed with a highly rigid structure in comparison to standard. It is constructed with extremely hard compounds that are able to maintain all the other physical and mechanical characteristics to excellent levels. The distinguishing feature of Super-elastic and Cushion tires is their ability to sustain high loads with minimal deformation. It is widely used in situations where it is of paramount importance to maintain the stability of the vehicle and, therefore, of the load. It is also utilised in other specific cases. Contact a FERENTINO INDUSTRIAL TIRES technician for advice before choosing this version.

ANTISTATIC-AS

This tire was designed to release the static electricity accumulated by the vehicle onto the ground. It is constructed with special additives which perform this action while maintaining all the other physical and mechanical characteristics to excellent levels. It is typically used in paint and solvent factories, in gas tank deposits, in environments with easily flammable fine dust particles or in environments where the accumulation of static electricity can cause explosions. In all of these cases, the use of this tire increases safety levels. The AS Super-elastic and Cushion tires are in compliance with the ISO standards. A certificate of conformity shall be provided upon customers' request.

NON MARKING-NM

This is a yellow coloured tire, designed not to leave dark marks on the ground surface. It is constructed with a yellow mixture, containing no dark substances. Its use is recommended in environments where cleanliness is of great importance, for example in the pharmaceutical, food and beverage, and electronic industries, or anywhere light coloured floors must stay clean.

SURFACE: RECOMMENDED USE

INNOVATIVE SOLUTIONS

FERENTINO HIGHRIDE INTEGRATED LOADER SYSTEM

The FERENTINO INDUSTRIAL TIRES integrated loader system is ideal for all stressful situations in which the machines have to work in a stationary position, travelling just short distances and carrying particularly heavy loads (scrap yards, landfills, timber yards, etc.).

REINFORCED RIM WITH FLAT BOTTOM CHANNEL

increased thickness

no aeration or inflation valve holes

STURDIER

perfect coupling to the tires

MORE SOLIDITY

HIGHRIDE TIRE

High stability tire designed to withstand very high loads. The reinforced sidewall limits vertical deformation and protects against accidental impact.

The compounds used guarantee maximum resistance to cuts and tears and consequently longer life. The tread is designed to improve traction in all working conditions.

RING PROTECTOR

The spacer perfectly traces the profile of the FERENTINO INDUSTRIAL TIRES tire sidewall, thus preventing infiltration of debris and the like.

RIM

The reinforced rim with flat bottom channel, designed especially to mount FERENTINO INDUSTRIAL TIRES solid tires, solves all skidding problems. Especially robust due to increased thickness and elimination of the aeration holes and the hole for the inflation valve.

FERENTINO HIGHRIDE QUICK

QUICK - Bead structure consist of a special border made of highly resistant rubber; guarantees a perfect fit on the rim with no need for fastening rings.

HIGHRIDE QUICK FOR QUICK AND EASY INSTALLATION

FOR BEAD QUICK VERSION

HIGHRIDE STANDARD (NON QUICK) FOR FITTING ON INDUSTRIAL MULTIPIECE RIMS

FOR BEAD STANDARD VERSION
Movable rimparts 1, 2 and 3.

RIMS FOR QUICK SOLID TIRES

- Fit all sizes of Quick Solid Tires from 8" to 24"
- Available for all standard applications.
- Adaptable to most custom applications.

INDUSTRIAL MULTIPIECE RIMS

- Fit all sizes of Industrial Tires from 8" to 24".
- Available for all standard and heavy duty (20 and 24") applications.
- Multipiece design includes 2 or 3 piece components or base wheel for the quick type applications.
- Fit tube type tires as well as STANDARD solid tires.
- Designed for easy tire installation and precise fitment.

SPLIT RIMS (DIVIDED TYPE)

- Designed for easy tire installation and precise fitment without press.

WHEELS FOR POB CUSHION TIRES

- Fit all sizes of press on band cushion from 6,5" to 22".
- Available for all standard applications.
- Adaptable to most custom applications.

FERENTINO PREMIUM THE TECHNOLOGY THAT ANTICIPATES TOMORROW BY 10%

Our prime objective? To extend tire life and save our customers time and money, without compromising on performance. Rather, improving performance even more compared to similar competing products. FERENTINO INDUSTRIAL TIRES' response has a name: **Ferentino Premium**. This new range can withstand a high number of working hours (10% more compared to other premium products) by generating less heat, the result of a new structure and optimised characteristics of the compounds.

The results achieved today with **Ferentino Premium** in terms of reliability, performance and safety were unconceivable just a few years ago.

Longer continuous service without stopping for maintenance means savings in terms of time and costs, as well as reducing environmental impact.

Less replacements mean less CO2 emissions, beneficial for the environment.

Ferentino Premium is the super-elastic superior tire by FERENTINO INDUSTRIAL TIRES offering the best performance in terms of durability, reliability and energy consumption.

The FERENTINO INDUSTRIAL TIRES R&D Division, after hundreds of hours spent on testing, has achieved the goal to optimize structures and compounds so as to obtain the best product in the market.

Low rolling resistance together with reduced heat generation allow **Ferentino Premium** to be used even in extreme operating conditions, guaranteeing long product life.

The Quality alternative for normal requirements & standard application

Wide profile and flat footprint

- Increases stability and grip

Large tread blocks and deep lugs

- Maximizes life and traction
- Established tread pattern design
Exceptional tread rubber compound properties
Ensures maximum tire utilization

 **FERENTINO**
FORKS CORPORATION

FERENTINO - GSP(RIB)

GSP

FERENTINO GSP(RIB)

FERENTINO GSP(RIB) NON MARKING

AS
antistatic

NM
non marking

Circumferential ribs

- High cornering capability and low vibration

Low rolling resistance

- Increases battery life and reduces fuel consumption

Excellent tread rubber compound

- For long lifespan

ECO PLUS NON MARKING

NM
non marking

Well-balanced rubber compound

- Operates in low intensity applications and offers the lowest operating cost.

Deep tread design

- Provides great traction and stability.
- Increases tire lifetime

Exceptional tread rubber compound properties

- Makes this tire the longest lasting tire in the industry for low intensity applications
- Excellent quality to price ratio

Steel bead reinforced heel

- Prevents rim slip

Middle layer cushion

- Middle layer provides an excellent cushioning effect

Wear indicator

- Ensures maximum tire utilization

ATHLETIK

ATHLETIK

ATHLETIK

ATHLETIK NON MARKING

S
special

Deep tread design

- Improves traction and stability

Alternative for pneumatic tires

- Reduces downtime by eliminating punctures

Budget compound

- Excellent quality to price ratio

S
special

Stepped tread design

- Provides excellent tread cleanout for improved off-road traction
- Longest wear

Reusable wheel

- Enables tire only replacement and lowers overall cost of ownership

Optimized conical aperture design

- Improves ride conformability and reduces aperture cracking

Smooth, full-width footprint

- Provides outstanding tread life and excellent stability

Quick Fit design

- Eliminates lock & side rings for quicker installation

FERENTINO SOLID TLH

STANDARD

SOLID TLH

SOLID TLH NON MARKING

S
special

Massive directional tread depth

- Maximizes off-road traction and durability
- Provides flat-free operation and ultimate durability

Stepped tread design

- Enhances cleanout for improved off-road traction

Triangular aperture design

- Optimizes stability, strength and comfort

FERENTINO PREMIUM POB

PREMIUM

FERENTINO PREMIUM POB

FERENTINO PREMIUM POB NON MARKING

NM
non marking

Optimal crowned profile

- Excellent cushioning for improved comfort

High-performance natural rubber compound

- Reduces chunking and cutting Suitable for both IC and electric trucks

Perfect bonding

- High quality bonding technology is used to keep the layers intact while working with heavy loads.

FERENTINO ECOPLUS POB

ECOPLUS

ECOPLUS POB

ECOPLUS POB NON MARKING

S
Special

Unique lug pattern

- Increased traction and lifetime

High performance compound

- Low rolling resistance
- Excellent quality to price ratio
- Reduces chunking and cutting

Perfect bonding

- High quality bonding technology is used to keep the layers intact while working with heavy loads.

FERENTINO ECOPLUS POB

FERENTINO HIGHRIDE POB

HIGHRIDE

FERENTINO HIGHRIDE POB

FERENTINO HIGHRIDE POB NON MARKING

Unique lug pattern

- Increased traction and lifetime

High performance compound

- Low rolling resistance
- Excellent quality to price ratio
- Reduces chunking and cutting

Perfect bonding

- High quality bonding technology is used to keep the layers intact while working with heavy loads.

CONVENTIONAL PNEUMATIC INDUSTRIAL TYRES

PNEUMATIC

SW

LT

NM
non marking

- Deep tread.
- Good stability.
- Resistant to damage to sidewalls: Side wall structure.
- Good traction.
- Good driving comfort.
- Complete SET*: Tyre + Tube + Flap.

APPLICATIONS

- Forklifts.
- Small - sized industrial tractors.
- Indoor trailers.
- Airport vehicles.

*The conventional industrial tyres SW and LT are TT (Tube Type) models for which complete assembly of tube and flap is recommended.

SERVICE, ACCESSORIES - SOLID TIRES FITTING PRESS 250 TON

FITTING AND REMOVAL PRESS FOR SUPER ELASTIC AND CUSHION TIRES

This press is able to perform fitting and removal operations of all sizes of super-elastic tires (with the exception of 14.00- 24).

The machine's fundamental characteristics are: reability, speed, power and precision. The press is composed of a metal structure, an adjustable lower work platform with area of 200 mm and an upper moveable platform with 600 mm of usable stroke. Manually controlled hydraulic movements. The press does not require a foundation. The press comes complete with CE certification, an Instruction Booklet for fitting and removal operations, as well as Use and Maintenance Booklet. The equipment necessary for fitting and removal of the super-elastic and cushion tires is sold separately upon request.

FERENTINO PREMIUM TIRES INSTALATION EQUIPMENT

- The installation equipment is available for wheel size from 8" to 24".
- Each size is painted in a different colour.

1 - Thrusting ring

2 - Bevelled ring

3 - Press ring

4 - QUICK de-mounting ring

5 - Seating rim

SOLID TIRES - USER INSTRUCTIONS, MAINTENANCE, REPLACEMENT AND CALCULATION OF WEAR LIMITS

1) INTRODUCTION

Tires are the only contact between the vehicle and the ground. It is therefore of paramount importance that they are maintained in good condition at all times, and that when the time comes to change them, correct replacements are done.

The tires fitted to your vehicle as Original Equipment were selected by the vehicle and tire manufacturers concerned taking into account the intended operations of the vehicle.

Changes in tire type, size and load capacity should not be made without first checking with the tire and/or vehicle manufacturer regarding possible effects on vehicle behaviour and safety.

2) FITTING AND REMOVAL OF TIRES

It is recommended that these operations be entrusted only to specialists who have the necessary equipment and expertise. Inexpert fitment may lead to personal injury and concealed damage to tires and wheels.

No special equipment is necessary for fitting solid tires on centrally divided conical rims, but appropriate presses and accessories are required for fitment on off-set divided conical rims, cylindrical rims and pneumatic tire rims.

The published instructions of the tire manufacturer must be strictly followed. Only approved proprietary tire lubricants should be used.

To avoid damage to the base of the tire, it must be placed on the rim concentrically and parallel to the axis. Only rims recommended by the tire manufacturer must be used.

3) TIRE LOAD AND SPEED

Tire load capacities are specified per tire. Published Standards or manufacturers' Manuals should be consulted to obtain the actual values applicable to a particular application at the speed specified, up to a maximum of 25 km/h.

Load interpolation within the specified speed steps is not permitted and the speed rating of the tire must be at least equal to the maximum speed capability of the unladen vehicle.

Continuous running should be avoided in order, to

prevent excessive heat build-up which may lead to tire break-up.

4) TIRE MAINTENANCE

Although solid tires require relatively little maintenance, they should be inspected from time to time in order to check their suitability for further use.

5) TIRE REPLACEMENT

Worn or damaged tires must be replaced in accordance with the tire manufacturer's recommendations. Also, national legal requirements should be checked as they vary from Country to country. When replacing a tire, special attention should be paid to the condition and suitability of the rim, as rim damage and incorrect fitment can result in tire break-up.

6) TIRE AGEING

Tires age even if they have not been used or have only been used occasionally. Rubber cracking may be evidence of ageing. Exposure to sunlight, heat and ozone will accelerate this process. Aged tires should be examined by a tire specialist to check their suitability for further use.

7) TIRE MIXING

Tires mounted on the same axle must be of the same type and size and must have approximately the same external diameter.

8) TREAD WEAR

8.1 INTRODUCTION

The limit for the tread wear of industrial vehicles is not defined by national or international standards. Several manufacturers provide instructions solely for their products. Recommendations by tire manufacturers should always be followed. However, in case no recommendations are provided by manufacturers, please abide by the contents published in this standard.

8.2 PURPOSE

This standard suggests tread wear limits for solid tires used on industrial vehicles that operate under conditions that are not regulated by the Highway Code and are to be used in case no instructions are provided by the manufacturer of the vehicle or tires. NOTE: Industrial vehicles that operate on public roads must be in order and comply with traffic circulation standards.

8.3 HAZARDS DUE TO EXCESSIVE TIRE TREAD WEAR

The hazards due to excessive tire wear are the following:

- a) Loss of load capacity that promotes the accelerated wear of the tread and leads to overheating of the tire.
- b) Loss of adhesion while accelerating or braking on unstable road conditions.
- c) Hazards are heightened if the tires mounted on the same axle are worn differently.
- d) Reduction in the vehicle's stability.
- e) Loss of the vehicle's directional control.
- f) Uneven load on twinned tires.

8.4 REDUCING HAZARDS

The hazards mentioned in the foregoing section can be reduced if: The tires mounted on the same axle are built by the same manufacturer, have the same size and are worn equally (this applies to any type of tire).

8.5 TIRE TREAD WEAR LIMITS

1) Pneumatic tire rim sizes

Wear indicators or Kerbing Rib are recommended. Solid Rubber tires for Pneumatic Rims may be used until the tread is worn to the wear indicator, if the tire has such a marking, or to the top of the kerbing rib, see page IS.3 of EDI. Where there is no indicator, use the tire until 3/4 of the original total thickness of the tire remains. To calculate the minimum diameter corresponding to this wear limit, measure the outside diameter of the worn tire, the outside diameter of an unworn tire of the same type, make and size, and the diameter of the wheel rim. The minimum permitted diameter of the worn tire is given by the formula:

$$D_{\text{worn}} = 3/4 (D_{\text{new}} - D_{\text{rim}}) + D_{\text{rim}}$$

where D_{worn} = the outside diameter of the worn tire
 D_{new} = the outside diameter of an unworn
 D_{rim} = the diameter of the wheel rim

2) Press-on-band, cured-on-band and conical base tires (rubber and non-rubber)

Press-on-band, cured-on and conical base tires may be used until 2/3 of the original total radial thickness of the tire remains, as given by the formula:

Cured-on tires:

$$D_{\text{worn}} = 2/3 (D_{\text{new}} - D_{\text{rim}}) + D_{\text{rim}}$$

Press-on-band and conical base tires:

$$D_{\text{worn}} = 2/3 (D_{\text{new}} - D_{\text{rim}} - 20) + (D_{\text{rim}} + 20)$$

Notes:

- a) All dimensions are measured in millimetres.
- b) The outside diameter of the tire D_{worn} and D_{new} may be calculated by measuring the circumference of the tire with a flexible tape, and calculating the diameter from the formula:

$$\text{Diameter} = \frac{\text{Circumference}}{\pi}$$

TREAD WEAR INDICATOR (TWI) FERENTINO INDUSTRIAL TIRES recommends for tires not to be worn beyond the TWI (Tread Wear Indicator) positioned on the tread of the tire.

The height of the TWI was defined according to a study based on safety and cost savings for the user. However, in case there is no TWI, FERENTINO INDUSTRIAL TIRES recommends to replace the tires for safety reasons when 10% of the original tread is worn.
